

Skyrocket Juniper

(Juniperus scopulorum
'Skyrocket')

Mature Height: 15'-20'

Mature Spread: 2'-4'

Growth Rate: Moderate-Fast

Skyrocket Juniper is a very narrow upright juniper. It is an excellent choice for privacy screens or as an accent plant. It can be planted close to buildings or fences without interfering with them. It naturally keeps its narrow shape with rarely any pruning needed. The color will vary slightly depending on the acidity of the soil, with a more green color in alkaline soil and a silvery-blue in more acidic soils.

The Skyrocket Juniper is frequently used as a spiral topiary plant due to its tight shape. This type of pruning is done starting when the plant is very small and requires some maintenance as the plant matures. It is a hardy choice that does well in sandy or rocky soils.
